DOCU-CREASE TECHNICAL INFORMATION

MORGANA DOCU-CREASE 35 & 52

The Morgana Docu-Crease is another innovative product designed and manufactured by Morgana to further complement our range of Document Finishing Machines. Available in two width sizes, 52cm or 35cm, the Docu-Crease is solidly constructed to give years of trouble-free use. Both models offer many unique features and are ideally suited for short to medium creasing volumes.

Superior Results

The Docu-Crease gives a superior finish compared to rotary scoring. This is because the creasing action crushes the fibres of the material, between a dye and an anvil. The result is a superb crease on substrates which can be damaged by the action of a scoring wheel.

The crashing action is a process proven to eliminate cracking of the most difficult materials.

Applications

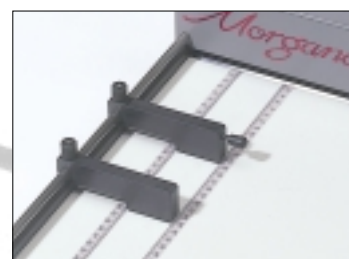

- Creasing glossy covers, stocks or materials with the grain running in the wrong direction, prior to folding or booklet-making.
- Cover stocks that have been produced by litho or the new digital printing processes using toner or ink.
- Xmas or greeting cards, invitations, menus, laminates or covers prior to thermal adhesive binding.

User Friendly Features

- Ergonomically designed for either left or right handed operation.
- Heavily constructed, yet light in operation.
- The Docu-Crease has two adjustable backstops for multiple creases on the same cover or for repeat jobs (additional backstops can be supplied).
- Fast, easy set-up with indicator scales showing the position of the creases.
