

THE MORGANA Electro-Creaser™

Quality blade and matrix creasing,
with a price and performance geared to
the needs of the smaller printer or inplant

Morgana Electro-Creaser

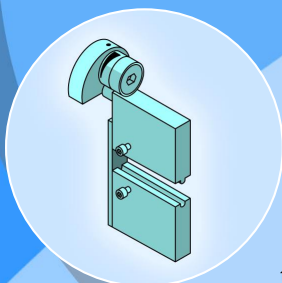

Morgana

THE FIRST NAME IN DOCUMENT FINISHING SOLUTIONS

The Electro-Creaser from Morgana

No.1 in Digital Print Finishing

The semi-automatic Electro-Creaser is the ideal unit for printers who need something faster than a manual creaser - such as the Morgana Docu-Crease - but cannot justify the cost of a fully automated machine like the Morgana AutoCreaser.

Made in the UK, the Electro-Creaser is ideal for the smaller printer or inplant. A compact, table-top unit, it is fast to set up and simplicity itself to operate. Like other Morgana products, it employs a genuine blade and matrix action which, unlike scoring, will not cause any damage to the substrate, and will produce a superb crease on all types of stock up to 350 gsm 120lb cover.

It provides 2 creasing widths as standard, - 1.6mm (0.063") and 1.2mm (0.05") - with the ability to change from one to another in seconds. It also has a special 'Super Speed' stop system, which greatly simplifies jobs that call for multiple creases. The creasing matrix is electronically activated by a foot switch for increased accuracy and productivity.

Unlike scoring, which can damage card or paper, the Morgana blade and matrix method ensures a clean sharp fold without damage to the substrate.

ElectroCreaser 52

Overall Dimensions

Length 780mm (30.7")
Width 640mm (25.2")
Height 220mm (8.7")
Weight 27.5Kgs (61lbs)

Max. Crease (To Backstop)

Length 520mm (20.5")
Width 520mm (20.5")

Min. Crease (To Backstop)

Length 30mm (1.2")

Power Requirement

1 phase 200/253v 50/60Hz
1 phase 100/125v 60Hz

ElectroCreaser 36

Overall Dimensions

Length 700mm (27.6")
Width 480mm (19")
Height 210mm (8.3")
Weight 17.8Kgs (40lbs)

Max. Crease (To Backstop)

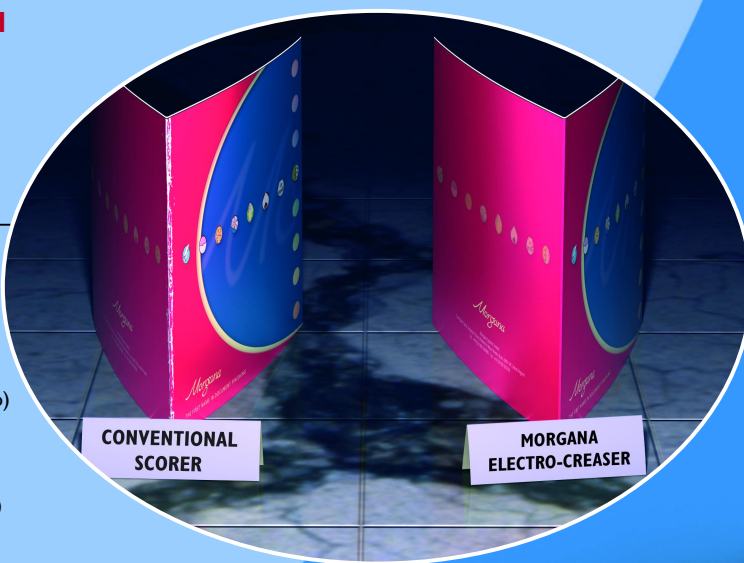

Length 435mm (17")
Width 365mm (14.5")

Min. Crease (To Backstop)

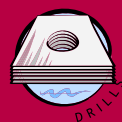

Length 30mm (1.2")

Power Requirement

1 phase 200/253v 50/60Hz
1 phase 100/125v 60Hz
