

KEEPING YOU IN CONTROL WHATEVER THE ANGLE

UFO Mk II

A new head-up display enables the UFO Mk II to provide new standards for ease of use and productivity. Advanced electronics allow the operator to check the status of all functions at a glance and because the display rotates through 180°, the operator can now work from either side of the folder. A single operator can now produce a wider range of work, especially when using Morgana cross-fold units, which can operate from either the left or right hand side of the machine.

The new unit also provides a greater range of adjustment for control of suction feed length and the gaps between each sheet. Counting and batching is also controlled with a total count and an indicator showing production speeds.

Technical Information

SPECIFICATION	UFO 1	UFO 5/2 cross-fold unit to link with UFO 1
OVERALL DIMENSIONS		
Length	75"	61"
Width	31"	28"
Height	57.5"	52"
Weight	407lbs	253lbs (UFO 6SB 45.6")
POWER REQUIREMENT		
	1ph 240v	from main unit
MAXIMUM SPEED S.P.H: 8.5"X11"		
	30,000	20,000
MAXIMUM SHEET SIZE		
Length	25.5"	18"
Width	18"	12.6"
MINIMUM SHEET SIZE		
Length	5.9"	4"
Width	4.7"	4"
MAXIMUM PAPER WEIGHT		
	80lb cover <small>Varies according to hardness and grain direction</small>	80lb cover
MINIMUM PAPER WEIGHT		
	16lb Bond	16lb Bond

THE FIRST NAME IN DOCUMENT FINISHING SOLUTIONS

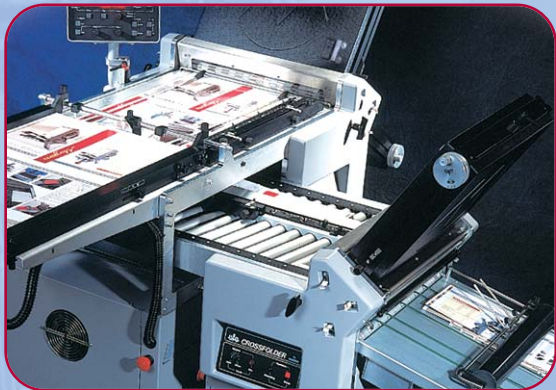

The Morgana UFO - The High Performance Air Feed Folder

The electric delivery can be fitted to the rear of the UFO. This provides greater productivity when handling heavier stocks or perforating and scoring.

The cross-fold unit can be fitted under the UFO to enable a landscape 16pp to be handled.

Extended delivery makes the operator's job easier on high volume work.

Morgana cross-fold units can operate from either the left or right of the folder to provide a greater range of folding options.

The fold plates are fully enclosed and all necessary adjustments can be made without removing them.

For more than a decade the Morgana UFO has been the best selling air feed folder in its class in markets throughout the world.

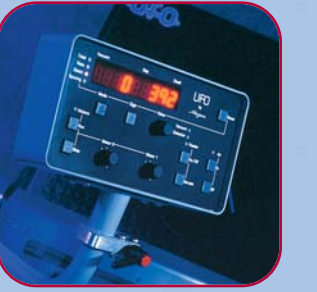

When a piece of equipment becomes an industry 'standard', there are always good reasons.

In the case of the UFO these include high productivity - 30,000 sheets per hour, large capacity, proven reliability and flexibility, together with an unmatched choice of options, including cross-fold units that link with the folder in five different ways.

Now the UFO has been made even better, in the form of a Mk II version that incorporates a new 'head up' display to make the folder far easier to use and even more productive. The new electronic display provides simple control of all functions. Because it rotates through 180°, the operator can now work from either side of the folder. This is particularly useful when using cross-fold units and allows a single operator to produce a much wider range of work.

The UFO Mk II features Morgana's pulsed action suction feed and electronic suction length adjustment. It provides dial-a-fold plate settings, combination fold rollers with pressure settings and side lay register. Perforating and scoring and counting and batching are standard.

All good reasons why the UFO Mk II, like its predecessor, is likely to be the top of its class for many years to come.
